

# Scenario 1: Sixty-eight thousand at Lumen Field

**Slug:** lumen-field-evac - **Repo:** github.com/joelcaggemini/titan-watch-seatac - **Your role:** incident commander, full authority, next page

## The kaiju, in thirty seconds

- **Gorathos.** Abyssal Colossus, 142 m, 88,000 t, 34.5 km/h. Walking ashore from Elliott Bay toward downtown through SoDo. Does not stop. Cannot be stopped. Anything it walks through is lost.
- **11 minutes** until it reaches the seawall. Straight-line estimate from Titan Watch, refreshed every 30 seconds. Firm on time, not on heading.
- **It is drawn toward dense noise and light.** The stadium is the loudest and brightest thing in the city. It does not pursue individuals.
- **Who sees it.** Titan Watch sees where it is, every 30 seconds. Stadium cameras see gates, police see streets, fans' phones see it first. Nobody sees which gate is safe. That gap is the scenario.

Sold out, 68,000 inside. Empty it into streets that face the kaiju, or hold them in a building never built to take a hit.

## Outcome, same for every scenario

Save as much human life as possible, then prevent as much public property damage as possible, in that order. A software tool is expected to come out of this.

**You are graded on, in this order:** people killed or injured inside and outside the stadium; crush injuries at gates; damage to Lumen Field and SoDo; and whether every decision you made was a decision, recorded, with a name on it.

The coach interviews you against this, narrows it to this clock and this building, and restates it after synthesis. The original stays in the scope file beside the restatement.

## Who reports to you

Nine specialists have already been interviewed. Their interviews are in `.copilot-tracking/dt/lumen-field-evac/`. Do not read them. The coach has, and will quiz you on what they said.

| Reports to you                    | What they own                     | What they keep saying                                  |
|-----------------------------------|-----------------------------------|--------------------------------------------------------|
| Stadium operations director       | Building, lights, PA, gate policy | Twenty-five minutes to clear, never timed              |
| Gate and crowd-flow supervisor    | Every gate, by radio              | Hold or open lives on channel 2, no record, no name    |
| Police incident lead              | Streets, officers                 | Streets and gates are two lists, never reconciled      |
| Fire battalion chief              | Crush response                    | Two gate lines covered; hears the clock fourth-hand    |
| PA and broadcast producer         | One voice for 68,000              | Cannot tell west from east                             |
| Sound Transit control             | Trains, platform                  | 2,500 southbound; nobody has called                    |
| Titan Watch analyst and liaison   | The clock                         | Time is firm, heading bends toward the lights          |
| A section steward, 300 level west | 400 people, one stair             | Silence means the nearest gate, and it faces the water |

## Already done, do not redo

Scope, stakeholder map, assumptions log, world rules, nine interviews, security scoping answers. All under `.copilot-tracking/dt/lumen-field-evac/`. The coach reads them.

**Out of scope for everyone:** engaging Gorathos, evacuating downtown, anything after it passes.

# Your card: Incident commander, Lumen Field

**Scenario 1, Lumen Field.** Kaiju facts are on page 1 of this pack. Human facts are yours: invent and label.

**Outcome:** save as much human life as possible, then prevent as much public property damage as possible, in that order. The coach narrows it; that is fine.

**Slug:** lumen-field-evac-commander

## Who you are

You are in charge. Stadium, police, fire, Sound Transit and the Titan Watch liaison all answer to you for the next 11 minutes. You can hold or release any gate, kill the lights, close any street, turn any train, send any crew anywhere. Nobody will argue. The only things you do not control are Gorathos and the clock.

## Who you can call, and for what

- Operations director: building, lights, PA, time to clear.
- Gate supervisor: which gates are open or held.
- Police lead: which streets are clear.
- Fire chief: what they can cover.
- PA producer: what 68,000 people hear next.
- Sound Transit: how many the platform can take.
- Titan Watch liaison: the clock, the heading, how stale.
- Section steward: what one concourse is doing.

Each sees a piece. You see what they tell you, when they tell you. No screen of your own.

## Your scope

In scope, you decide and order:

- Hold or release, gate by gate, and when.
- Which sections go to which gate, which stay, what they are told.
- Lights, PA, streets, trains, crews, when to stop saving everyone and start choosing.

Out of scope:

- How a specialist carries out your order. They know their job.
- Where Gorathos is or goes. Titan Watch reports it; nobody controls it.

## Anchors, fixed

- Every order you give takes minutes to reach the people who act on it, and every report reaches you late.
- No one has ever emptied this building against a clock.

## Three phrases

"I do not know." - "Assume and label it." - "Ask the specialist, then tell me."

## Your prompt

/clear, /hve-core:dt-coach, paste. Afterwards: commit locally, no push, then the synthesis prompt from the shared instructions.

```
Resume project lumen-field-evac. Scope is done under
.copilot-tracking/dt/lumen-field-evac/; read it, including every interview
there, do not redo it. I play the incident commander with full authority: the
specialists in those interviews report to me and carry out my orders. I see
only what they report. Interview me as that role, five questions, using what
the specialists said. Then write interview-commander-roleplay.md under slug
lumen-field-evac-commander. Label everything role-play. Expect a software
tool. Do not offer the canonical deck.
```
